e-Commerce & Web Applications

CISglobal has extensive experience in developing new web-based applications and migrating existing applications to web-based environments. We combine expertise in network operations and infrastructure security with the latest web-based applications development techniques to produce reliable e-commerce systems. Our Internet solutions includes:

- Internet e-Commerce Solutions
- Secure Sockets Layers (SSL)
- Public Key Infrastructure (PKI)
- DES3 - Encryption
- 508 Compliance
- Digital Signatures
- Disaster Recovery
- Integrated e-Government Solutions

Security & Testing Labs

Through an exclusive partnership with InfoGard Laboratories, CISglobal can provide security testing and evaluation for clients requiring NIST FIPS certification for security solutions and products. Recognized by both the National Institute of Standards and Technology (NIST) and the Canadian Security Establishment (CSE), InfoGard Laboratories is one of only five firms accredited to perform FIPS 140-1/140-2 validations under the National Voluntary Laboratory Accreditation Program (NVLAP). Through a unique and highly effective process to streamline the FIPS 140-1/140-2 validation process, developers working with InfoGard Laboratories have enjoyed a 100% FIPS validation success rate.
