

TELECOMMUNICATION & CABLING SERVICES

In the next decade, traditional telecommunication services will be replaced by new models emphasizing enhanced services and content over basic access and transport. These new services leverage network-based storage, digital photography, and voice portals; it will spur the use of public wireless LANs, wireless virtual private networks, mobile multimedia messaging, and other technologies.

CISglobal designs and installs customized telecommunications networks to meet standard and enhanced telecommunication services. We complete installations in a cost-effective manner for our customers by building and maintaining a secure communications infrastructure.

Telecommunications Services

- Design, Installation, and Management
- Voice and Data Transmission
- Bill Reconciliation
